**Provided by volunteer Registered Dental Hygienists, Student
Dental Hygienists & Dentists**

**Sponsored by the Texas Dental Hygienists' Association
and the Greater Fort Worth Dental Hygienists' Society**

**Children-ages six to fourteen with parent
(*First come, first served*)**

Dental Sealants are thin protective plastic coatings that cover and protect the chewing surfaces of back teeth. Dental Sealants are painless and easy to apply. When a child's permanent molars come in, usually around ages six to fourteen, parents should consider having sealants applied. Research has shown that dental sealants are effective in reducing chewing surface decay.

Dates and Locations:

**October 15, 2011, 9am – 1pm – Monarch @ Ridgmar Mall
